

# TankRadar® STaR

## Alarm handling: High Level and Overfill

**TankRadar STaR** is a total systems solution for integrated tank gauging, cargo monitoring and control.

The STaR system features a unique 3-in-1 solution. Level gauging, High Level and Overfill alarm systems are integrated in one single unit, designed as independent, galvanically separated and intrinsically safe electronic measuring channels.

The STaR system offers level gauging and integrated alarm handling together with monitoring and control of valves and pumps—a total solution for safe and reliable handling of the cargo at sea and when loading and discharging. The system includes monitoring of tank cleaning machines and measuring in ballast and service tanks.

The operator interface provides clear read-outs and a good overview for easy, thorough control and monitoring, ensuring the highest level of safety and easy operation.
