

Low noise variable displacement piston pumps

P**V(M) series

This pump series offers low noise, high performance, and reliability with various functions for fast response and stability with a variety of controls such as electric direct control, pressure compensator control, and load sensing. Double pump configurations to meet system needs are also available. These pumps are ideal for customer needs for energy saving, high speed, and low noise.

Model Code

(F11)-P16V-(F)RS(G)-11-CMC-10-J

1 2 3 4 5 6 7 8 9

- [1] Hydraulic fluid
 - Omit: mineral oil based fluid
 - F11: water glycol based fluid
- [2] P16V swash plate type variable displacement piston pump
 - P16V
- [3] Pump mounting
 - Omit: flange mounting
 - F: foot mounting
- [4] Rotation (viewed from shaft end)
 - R: right rotation (clockwise)
 - L: left rotation (counter-clockwise)

- [5] Suction and delivery port piping system
 - (Tapered threaded pipe for JIS pipes used for drain port)
 - Omit: SAE O-ring seal coupling connection end port type
 - G: SAE 4 bolt flange connection end port side
 - 1: SAE 4 bolt flange connection side port type
- [6] Pump design no.
- [7] Pump control method
 - Refer to the pump and control system combination table (on page A4-2).
- [8] Maximum displacement adjustment function
 - Omit: not provided
 - C: w/adjuster
- [9] Control valve design no.

Model Code

(F11)-P70V(3)(F)R-(2)(C)22-CMC-10-J

1 2 3 4 5 6 7 8 9 10 11

- [1] Hydraulic fluid
 - Omit: mineral oil based fluid
 - F11: water glycol based fluid
- [2] P**V swash plate type variable displacement piston pump
 - P16VM, P21VM, P21V, P31V, P40V
 - P70V, P100V, P130V
- [3] Code for double pump
 - Omit: single pump
 - 3: integrated fixed vane pump (P70V, P100V)
- [4] Pump mounting
 - Omit: flange mounting
 - F: foot mounting
- [5] Rotation (viewed from shaft end)
 - R: right rotation (clockwise)
 - L: left rotation (counter-clockwise)

- [6] Integrated vane pump displacement code (input only if [3] is 3)
 - Refer to specifications.
- [7] Integrated vane pump delivery port position (input only if [3] is 3)
 - Viewed from cover side with control valve up
 - A: bottom B: left C: up D: right
- [8] Pump design no.
- [9] Pump control method
 - Refer to the pump and control system combination table (on page A4-2).
- [10] Maximum displacement adjustment function
 - Omit: not provided
 - C: w/adjuster
- [11] Control valve design no.

Model Code

- Pump and control valve combination table (consult Tokyo Keiki for parts not supported)

Pump control method

Pump Control Method		Characteristics Curve	Description	Functional Symbol (detailed)
Name	Code			
Pressure compensator control	C		<ul style="list-style-type: none"> When pump delivery pressure approaches the compensator setting, pump delivery is automatically reduced to the minimum flow necessary to maintain the pressure. Pressure setting can be adjusted manually. Pressure adjustment ranges C: ~21MPa CM: ~10.5MPa 	
	CM			
Dual pressure, dual flow self-pressurized control	2P		<ul style="list-style-type: none"> Dual pressure compensation control enables automatic switching from low pressure-high flow to high pressure-low flow modes. 	
	2PU			
Remote pressure compensator control	CG		<ul style="list-style-type: none"> Setting pressure of pressure compensator control can be set from a separate location with a remote control valve. 	
	EP			
Proportional solenoid valve pressure compensator control			<ul style="list-style-type: none"> Setting pressure of pressure compensator control can be set proportionally with proportional solenoid pressure control valve integrated on pump. 	
Load sensing control	CVF (CV)		<ul style="list-style-type: none"> Pump delivery automatically controlled to maintain constant differential pressure across flow control valve located downstream of pump. Energy-saving type pump control which supplies minimum flow and pressure necessary to drive load (actuator). Figure at right is of CVF control. 	
Remote load sensing control w/pressure compensator	CGVF		<ul style="list-style-type: none"> Pump delivery automatically controlled with load sensing control during flow control. Pump control automatically switches as pump delivery pressure approaches pressure compensator control setting (cutoff pressure). 	

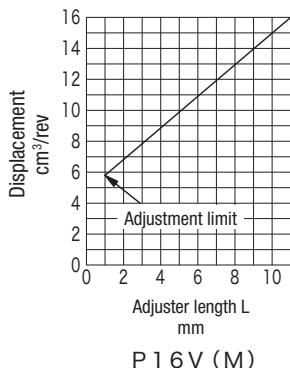

Pump control method

Pump Control Method		Characteristics Curve	Description	Functional Symbol (detailed)
Name	Code			
Multi-stage pressure compensator control	MCTU	 <p>Note: Unload when solenoid is OFF.</p>	<ul style="list-style-type: none"> Control of setting pressure for unload and pressure compensator is possible by switching solenoid valve integrated on pump. 	
	MC2		<ul style="list-style-type: none"> 2-pressure compensator control setting is possible by switching solenoid valve integrated on pump. 	
	MC2U	 <p>Note: Unload when solenoid is OFF.</p>	<ul style="list-style-type: none"> Unload and 2-pressure compensator control setting is possible by solenoid valve integrated on pump. 	
	MC3		<ul style="list-style-type: none"> 3-pressure compensator control setting is possible by switching solenoid valve integrated on pump. 	
Electric direct control	EDQS		<ul style="list-style-type: none"> Position sensor mounted on pump detects swash plate angle provides linear control of delivery flow in response to flow control signal. 	
	EDS		<ul style="list-style-type: none"> In flow control mode, pump delivery is controlled by flow control signal and as pump delivery pressure approaches the pressure setting signal, mode automatically switches to pressure control.
